## High Elongation Fabric

This high elongation PVC coated fabric is formulated and designed for wrapping tight radius parts with no texture lost or deformation. It is designed to support a variety of applications including seating, headrests, map pockets, consoles, doors and instrument panels. This high stretch material provides a leather like look and feel in any color, accommodates high strain without tearing making it easy to implement stitching applications, and meets sun load requirements. The estimated cost is \$2 USD a sq. ft. less than leather.
